

FaceBase: Interaction, Visualization, Collaboration, and Computation

Harry Hochheiser
for

the FaceBase Hub Technical Team

U. Pittsburgh Department of Biomedical Informatics

harryh@pitt.edu

www.facebase.org

My perspective...

- Computer Science
 - Human-Computer Interaction
 - Information Visualization
- Building Collaborative Systems

Information Visualization

- “ The use of computer-supported, interactive, visual representations of abstract data to amplify cognition” Card, Mackinlay, Shneiderman 1999
- 'abstract' concepts
- No “given” representation
- Support annotation and search tasks

Visualization: A Picture is worth a thousand words

- Visual bandwidth is huge - more so than for other senses
- Fast, parallel
- Good pattern recognition
- Pre-attentive processing

Appropriate visual representations of data can reveal structure, aid cognition, and facilitate development of understanding.

Information Visualization

- Visualization +Interactivity
- Rapid, incremental, reversible queries
- Overview → Detail
- Multiple coordinated views
 - Alternative representations of data
- Searching, Browsing, Exploration

Networks, Interactions, pathways - Cytoscape www.cytoscape.org

The screenshot displays the Cytoscape Desktop interface. The main window shows a network visualization of 'hsapiens orthologs' with nodes and edges. The interface is divided into several panels:

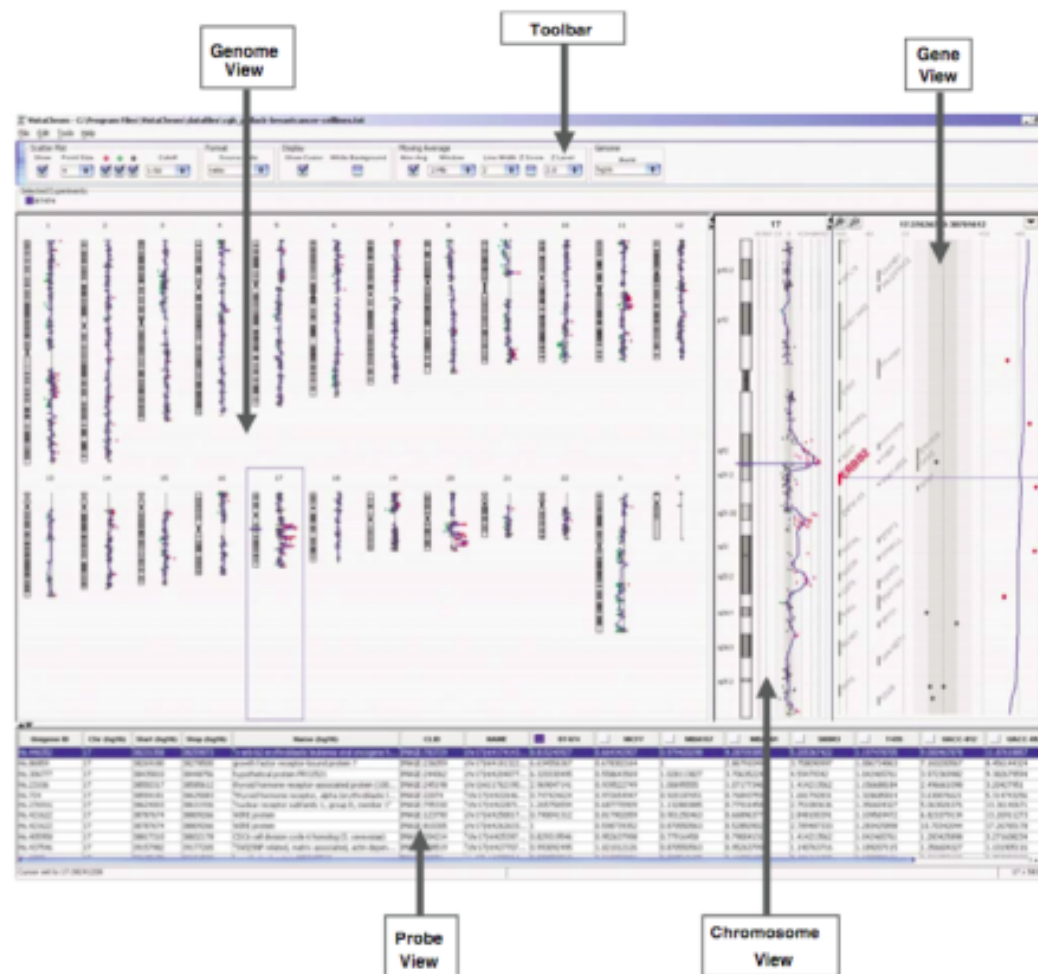

- Control Panel:** Contains 'Network', 'VizMapper™', and 'Editor \ Filters'. The 'Current Visual Style' is set to 'IntAct Style'.
- Visual Mapping Browser:** Lists various mapping types and their corresponding colors. For example, '2 hybrid' is mapped to red, '2h fragment pooling' to orange, and '3 hybrid method' to yellow.
- Data Panel:** Contains a table with columns for ID, Official Symbol, EntrezGene ID, Pathway, and GO Term: Biological Process. A context menu is open over the table, listing pathways such as 'KEGG pathway: Cell cycle', 'KEGG pathway: Prostate cancer', and 'Reactome Event: Cell Cycle (Mitotic Checkpoints)'.

ID	Official Symbol	EntrezGene ID	Pathway	GO Term: Biological Process

ArrayCGH - copy number variation - VistaChrom

(Kincaid, et al. 2005)

TimeSearcher & Microarray Data

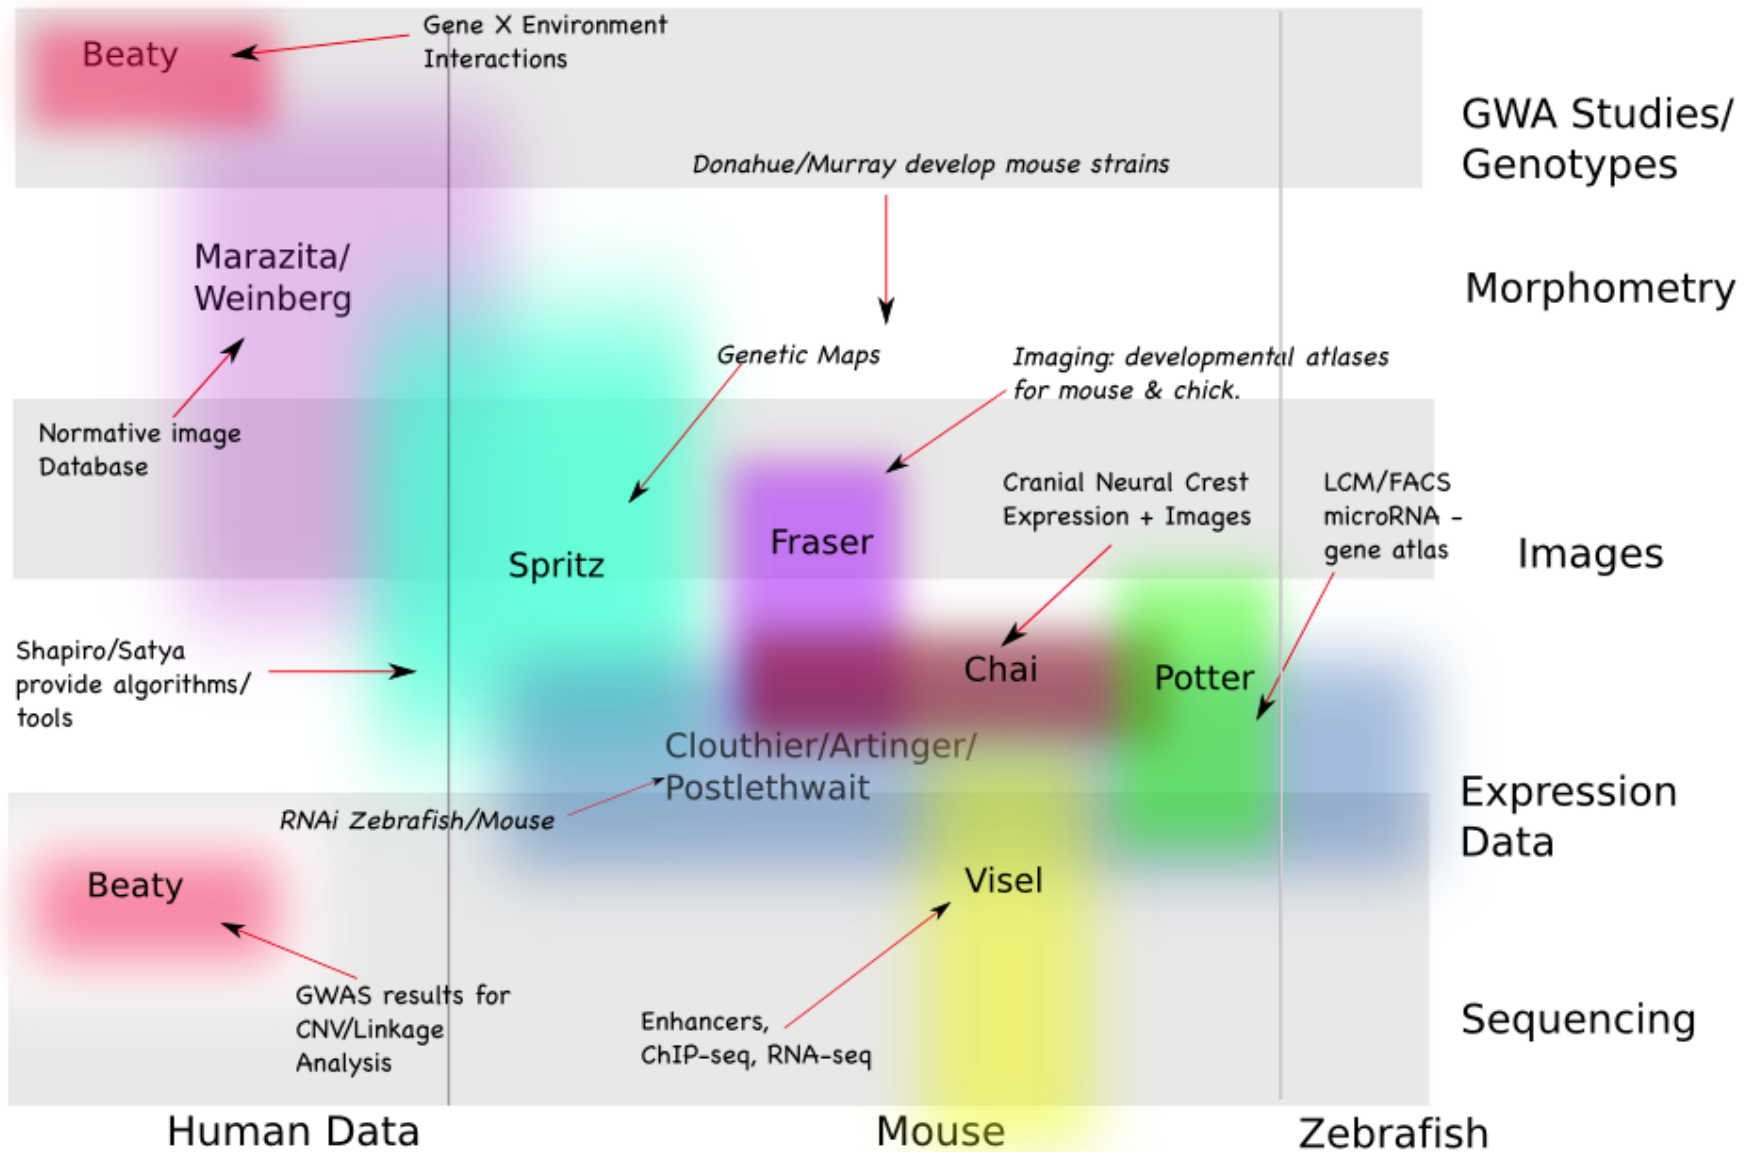

InfoVis & HCI for FaceBase

- Can we improve
 - Searching and browsing?
 - Understanding of connections between datasets?
 - Integration of diverse data types?

What's Different about FaceBase?

- Range of Data Types
 - Integration of diverse data types: sequences, images, genotypes, phenotypes....
 - Aggressive data sharing plan
- Collaboration Support?
 - Explicit interactions in several projects
 - Similar overlaps in interests → new collaborations?

Organizational/Socio-Technical Challenges

- Gary & Judith Olson U.C. Irvine (formerly U. Michigan)
- Science of Collaboratories
 - 5- year, NSF-funded
 - scienceofcollaboratories.org
- **Scientific Collaboration on the Internet** Olson, Zimmerman, & Bos, eds., MIT Press 2008

"From Shared Databases to Communities of Practice"

Bos, et al., in Olson, et al.

- 7 types of collaboratories
 - Shared Instrument
 - Community Data System
 - Open Community Contribution System
 - contributions come in the form of work rather than data
 - Virtual Community of Practice
 - Virtual Learning Community
 - Distributed Research Center
 - "like a university research center, but at a distance. Distributed Research Centers are unified by a topic of interest and joint projects in that area".

Which is FaceBase?

“From Shared Databases to Communities of Practice”

Bos, et al., in Olson, et al.

	Community Data System	Open Community Contribution System	Distributed Research Center
Technology Issues	Data formats Modeling and visualization	Interoperability, ease of use Data formats	All issues faced by others, including data formats Workplace awareness
Organizational Issues	Motivating contributors Large-scale decision-making	Motivating contributors Quality control	All issues faced by others Cross-institutional IP Career issues for younger investigators?

A Theory of Remote Scientific Collaboration (TORSC)

J. Olson, et al., in G. Olson, et al.

- *How do we demonstrate success?*
- Measures of success
 - *Impact on science* – discoveries, papers, artifacts, research quality, etc.
 - *Science Careers* – diversity, breadth of participation, tenure, quality of life & satisfaction of researchers
 - *Inspiration to others* – new collaboratories, new software
 - *Funding and public perception* – funding renewal, public interest, more funding for collaboratories
 - *Tool use* – Development and demonstrated use/reuse of production-quality software

TORSC: Factors that lead to success

J. Olson, et al., in G. Olson, et al.

- Nature of the work – tightly coupled or not
- Common ground
 - *Mutual knowledge* – past experience and terminology
 - **Common vocabulary is key**
 - Mappings? Zebrafish anatomy ontology has no entry for palate
 - *Beliefs and Assumptions in Management* – hierarchical vs. informal...

Mouse BIRN as a “mutual knowledge” success story

- “Atlas” shows relationship between terms
- Spatial layout – point to areas of interest without using terms
- Use of consensus terminology may not be necessary
 - If there are ways to map between related term
- Ontologies possible, but resource-intensive

TORSC: Factors that lead to success

J. Olson, et al., in G. Olson, et al.

- Common ground, continued...
 - *Beliefs and Assumptions in Management* – hierarchical vs. informal...
 - Common style -> aligned interactions and expectations
- *Collaboration Readiness*
 - *Work-related Dimensions*: techie vs. bench scientist tensions
 - *Social dimensions*: do people like working together?
 - Trust?
 - Collective efficacy? – feel empowered to make changes?

TORSC: Factors that lead to success

J. Olson, et al., in G. Olson, et al.

- Management, Planning , and Decision Making
 - *Time and Attention:* Are participants dedicating enough time?
 - *Management:* Is there a good management structure that includes all players?
 - *Communication and Possibilities for Redirection* – is there appropriate dialog that can be used to support changes in focus if needed?
 - *Knowledge Management, Decision Making, Institutional Issues*
- Technological Readiness: “the key is to understand the real needs of the end users, not to push 'cool' technologies on people.”

TORSC: Underlying Themes

- Collaboratory success depends upon commitment from involved parties
- It's not just a matter of writing code
- Without meaningful commitment, it won't work
- Use TORSC to see if the necessary support and commitment is there...

TORSC & FaceBase

- Judith & Gary Olson have developed an online assessment of collaboration readiness
- FaceBase to pilot this tool – provide a baseline measurement of readiness
- Please cooperate
 - Give us a list of folks in your labs/institutions who are participating
 - Get these folks to complete the survey (~ 20 minutes)
- Use this to demonstrate value to funders
